## EDUCATION

### Rochester Institute of Technology

Rochester, NY

*Bachelor of Science in Software Engineering*

- **Cumulative GPA: 3.13**
- **Dean's List: Spring 2023**
- **Relevant Courses:** Eng Cloud Software Systems, Software Testing, Engineering of Enterprise Software Systems, Engineering of Software Subsystems (Embedded), Software Process & Project Management, Web Engineering, Software Development and Problem Solving 1 & 2 (Python, Java, Git)

## CERTIFICATIONS

AWS Certified Cloud Practitioner – Amazon Web Services, 2025

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, Java, C, C++, SQL.

**Frontend:** HTML, CSS, React.js, Next.js, Tailwind CSS.

**Backend:** Node.js, Express.js, REST APIs, OAuth 2.0, JWT.

**Databases:** MongoDB, PostgreSQL.

**Dev Tools:** Git, GitHub, GitHub Actions, GitLab (CI/CD, Runner), Docker, Docker Hub, VS Code, Postman, cURL, Vim, Jest. **Cloud & Infra:** AWS (Lambda, EventBridge, SNS, Comprehend, EC2, S3, CloudWatch, IAM), Terraform, Vercel.

**Other:** Apache HTTP Server, Selenium, JSON, XML.

## PROJECTS

### Live Transcribing Fact Checker | *React Native, Azure Speech Services, Google Gemini API* 2025

- Developed a mobile application that provides real-time transcription and fact-checking capabilities using React Native.
- Integrated Azure Speech Services API for accurate real-time speech-to-text transcription.
- Implemented Google Gemini API for intelligent fact-checking and verification of transcribed content.
- Created a user-friendly interface for displaying transcription results alongside fact-checking insights.
- Optimized performance for real-time processing and reduced latency in mobile environments.

### Stock Sentiment Tracker | *AWS (Lambda, EventBridge, SNS, Comprehend), Terraform, Boto3, Python* 2025

- Collaborated in a team of four to build a sentiment analysis platform for stock discussions using AWS cloud services.
- Developed AWS Lambda functions using Python and Boto3 to query DynamoDB and analyze stock sentiment with Amazon Comprehend, returning structured scores for frontend display.
- Configured EventBridge rules and Lambda triggers to send daily email alerts via SNS for subscribed watchlist tickers.
- Wrote Terraform code to provision infrastructure (EventBridge, Lambda, SNS, IAM roles), excluding DynamoDB.
- Ensured efficient sentiment analysis by skipping entries with existing scores and conditionally invoking Comprehend.

### Enterprise Application Project | *MERN Stack (MongoDB, Express.js, React, Node.js), Recharts* 2024

- Designed and implemented a full-stack application using the MERN stack, adhering to departmental and corporate requirements.
- Developed and tested a MongoDB-backed RESTful API with Express.js, including endpoints for CRUD operations, database initialization, and unit tests using Jest.
- Created a React-based client application, integrating features such as filtering, adding, editing, and deleting data.
- Deployed the full application on an Ubuntu server with Node.js and MongoDB, ensuring independent functionality for each department's APIs and client apps.
- Collaborated on implementing a consistent corporate theme across all departmental applications with shared landing pages and branding.
- Conducted operations reviews with the professor and had frequent team meetings.
- Added an integrated dashboard with Recharts for data analytics, providing metrics such as employee breakdowns, sales insights, and cost analysis with interactive visualizations.
